

Studio OneClick by Studio Designer

Studio Designer provides powerful project management apps to thousands of interior design professionals.

Studio OneClick is a tool designed to optimize your sales. This tool allows designers to capture product information and images from manufacturer websites. The product information and images are automatically transferred to a designer's Studio Designer account, where the product can quickly and easily be proposed to their clients.

The newly updated version of OneClick is full of expanded features which offer greater efficiency for designers, resulting in greater sales potential for you. Simply add the new OneClick link to your product pages, free of charge. Authenticated designers can then capture product information and images with just ONE CLICK. You are in complete control of all information that designers capture.

Studio Designer provides high profile marketing to manufacturers which utilize the OneClick link on their website, giving you priority placement and making your logo and information highly visible to our users.

TECHNICAL INSTRUCTIONS

Add the Studio OneClick link on your product detail page and designers can easily propose your products.
